

Instellen twitterfeed contentblok

Je kunt een twitterfeed instellen op diverse documenttypes (medewerker, rubriekpagina faculteit/instituut); hierin staat een aantal velden die gegenereerd moeten worden vanuit je twitteraccount: consumer key, consumer secret, access token en access token secret

Je moet eerst een App creeren, met alleen leesrechten. Dit doe je als volgt:

Ga naar <https://apps.twitter.com/>

Twitter Apps

You don't currently have any Twitter Apps.

Create New App

Na 'Create New App' vul je de verplichte velden in (n.b. je mobiele nummer moet in Twitter geregistreerd staan bij je settings, anders kun je geen App maken):

Application Details

Name *

Your application name. This is used to attribute the source of a tweet and in user-facing authorization screens. 32 characters max.

Description *

Your application description, which will be shown in user-facing authorization screens. Between 10 and 200 characters max.

Website *

Your application's publicly accessible home page, where users can go to download, make use of, or find out more information about your application. This fully-qualified URL is used in the source attribution for tweets created by your application and will be shown in user-facing authorization screens. (If you don't have a URL yet, just put a placeholder here but remember to change it later.)

Callback URL

Where should we return after successfully authenticating? OAuth 1.0a applications should explicitly specify their oauth_callback URL on the request token step, regardless of the value given here. To restrict your application from using callbacks, leave this field blank.

Description moet ten minste 10 characters lang zijn; de Name en de Description zie je nit terug, ook niet de URL die je hier invult.

Application Settings

Your application's Consumer Key and Secret are used to [authenticate](#) requests to the Twitter Platform.

Access level	Read and write (modify app permissions)
Consumer Key (API Key)	z7JofHfBv06snGbBiY6q2QYRi (manage keys and access tokens)
Callback URL	None
Callback URL Locked	No

Na het creëren zie je de application settings: kies 'modify app permissions' en zet deze op 'read only'.

Vervolgens kun je via 'key and access tokens' de benodigde velden ophalen:

The screenshot displays the 'Keys and Access Tokens' section of an application settings page. At the top, there are four tabs: 'Details', 'Settings', 'Keys and Access Tokens' (which is active), and 'Permissions'. Below the tabs is the 'Application Settings' section, which includes a warning: 'Keep the "Consumer Secret" a secret. This key should never be human-readable in your application.' The settings are as follows:

Consumer Key (API Key)	<code>z7JofHfBv06snGbBiY6q2QYRi</code>
Consumer Secret (API Secret)	<code>CjTzyphwUPrzD9Lr7iZoDvmx7Ywwmkf5xwGxgfh6CUakRbwsDP</code>
Access Level	Read-only (modify app permissions)
Owner	geteuwen
Owner ID	3128131297

Below the settings is the 'Application Actions' section, containing two buttons: 'Regenerate Consumer Key and Secret' and 'Change App Permissions'. A back arrow is visible below this section.

The 'Your Access Token' section follows, with a warning: 'You haven't authorized this application for your own account yet.' and a note: 'By creating your access token here, you will have everything you need to make API calls right away. The application's current permission level.' Below this is the 'Token Actions' section, which contains a single button: 'Create my access token'.

kopieer deze in respectievelijk 'OAuth consumer key' en 'OAuth consumer secret' en klik op Create my access token.

Je ziet dan je de volgende velden:

Your Access Token

This access token can be used to make API requests on your own account's behalf. Do not share your access token s

Access Token	3128131297-vqxA870MOBJHkqqR0Hq02tO1zIB4VhTuZLn09mR
Access Token Secret	5IzgdMiBmrT2ap6cqNzV4gs6kgx7cenglRIIWT0K6opa
Access Level	Read-only

kopieer deze in respectievelijk 'OAuth access token' en 'OAuth access token secret'.
